Portfolio: sofeeyahade.github.io

SUMMARY

Self-taught data analyst with a laboratory science background and three end-to-end projects in SQL and Power BI. I clean and validate data, answer business questions with SQL, and report findings together with their limitations. Seeking a junior data analyst role.

SKILLS

- **SQL (MySQL):** data cleaning, joins, CTEs, aggregations, CASE logic, window functions, exploratory analysis
- **Power BI:** Power Query, DAX measures, multi-page dashboards, KPI reporting
- **Excel:** pivot tables, formulas, data cleaning and standardisation
- **Other:** Python (basic: Pandas, Matplotlib); data documentation and cleaning logs

PROJECTS

Fintech Credit Risk & Underwriting Optimization | MySQL, Power BI, DAX

- Analysed 39,717 loans ($445.6M portfolio) in SQL and found $68.1M (15.3%) charged off; default rates rose from 13.1% on small loans to 18.8% on large loans.
- Simulated a lending rule for renters borrowing $20K or more: it would avoid $9.9M in charged-off loans but also block $40.6M of loans that were repaid or current, so I recommended targeted limits over a blanket ban.
- Built a Power BI dashboard and documented the method, assumptions and limitations.

Healthcare Admissions and Billing Analysis | Excel, Power Query, Power BI

- Cleaned 55,500 hospital records to 49,904 by removing 5,500 duplicates and 96 invalid billing records, and recorded every step in a cleaning log.
- Built a 5-page Power BI report on admissions, demographics, billing and length of stay. Found billing nearly uniform across conditions ($25.3K to $25.8K average) and admissions stable from 2020 to 2023, with 2019 and 2024 only partial years.
- Flagged data limits (near-unique hospital names, synthetic data) so findings are not over-read.

Traffic Accident Analysis | MySQL, Power BI

- Cleaned and analysed 209,275 crash records in SQL (31 duplicates removed) and built an interactive Power BI dashboard.
- Compared injury rates, not just counts: rain had the highest rate at 41.2 injuries per 100 crashes, although clear weather had the most injuries because it has the most crashes.
- Found that 26.7% of dry-road crashes have no determined cause, a data-quality gap worth fixing at source.

EXPERIENCE

Data Analytics Intern (Remote), TechBridge 30-Day Internship Program, Baselink Services Limited
October 2026 to present

- Completing structured data analytics tasks and projects to a set of deadlines in a remote program.
- Working toward a required final project and taking part in the internship community.

Quality Control Officer, Acreage Integrated Food Company Limited, Ogun State
July 2025 to June 2026

- Carried out physical and chemical analyses (pH, Brix, specific gravity, titration) and kept accurate analytical records.
- Maintained quality-control documentation for traceability, audit readiness, GMP and SOP compliance.
- Represented the quality-control department during external inspections and audits.

NYSC Corps Member / Assistant Lecturer, Osun State Polytechnic, Iree, Osun State
July 2024 to March 2025

- Led biochemistry laboratory sessions for more than 100 students and trained them in analytical methods.
- Streamlined standard operating procedures for key experiments to improve laboratory workflow.

EDUCATION AND TRAINING

Higher National Diploma in Biochemistry, Gateway ICT Polytechnic, Saapade, Ogun State (2021 to 2023)
National Diploma in Science Laboratory Technology, The Polytechnic of Ibadan, Oyo State (2017 to 2019)
Data Analytics Essentials Certificate, Cisco, through NJFP (October 2026)
Data Analyst Bootcamp, Alex the Analyst (certificate)
